

Amphion Medical Solutions Celebrates 10 Years!

On December 1, 2011, Amphion Medical Solutions celebrated its 10-year anniversary.

Located at 8301 Excelsior Drive, Amphion specializes in providing medical coding and transcription services and technology solutions to hospitals and clinics throughout the U.S. Amphion continues to grow rapidly both in revenues and staff, employing more than 500 full- and part-time professionals, most of whom are home-based.

Amphion is led by the team of Mike Cavill (Chairman and Co-Founder), Cindy Barker (President, Transcription) and Pamela Wirth (President, Coding, Compliance and Quality).

Amphion combines extensive healthcare experience and leading-edge technology to stand at the forefront of today's health information management industry. The company offers the proven benefit of expertise in outsource services to meet clients' needs for credentialed and accurate medical coders and transcriptionists, proper and correct reimbursement for healthcare products and services, timely response, regulatory compliance, and training and education.

Coding and transcription are essential support services in healthcare. Coding involves translating patient treatments into specific billing codes that enable hospitals, physicians and clinics to be reimbursed for their services, and it is a highly-regulated process. Transcription involves translating physician dictation into medical records that can be used for treatment and billing purposes. Amphion's sophisticated voice-recognition technology makes the company a national leader in medical transcription services.

Currently, Amphion is working with its staff and clients to gear up for a complete, comprehensive overhaul of federal coding guidelines used to determine reimbursement for all U.S. hospitals and healthcare providers. ICD-10, as the new system is called, increases the number of diagnosis codes available from approximately 15,000 to more than 68,000, requiring a major retraining of coding staff and an overhaul of hospital and clinic IT and billing systems. While the new system will not take effect until October 2013, Amphion is busy training staff now and also will offer training to its clients.

The company name is derived from classic Greek mythology; Amphion was the son of Zeus and the twin brother of Zethus (together they built Thebes). Following the theme, the company's technology products also borrow from mythology, with names including Themis (coding technology) and Triton (transcription).
